<i>Color Effects and Artistic Effects</i>	76		
<i>Remove Background Effect</i>	76		
<i>Crop Picture Effect</i>	77		

Note to Home Students:

This lesson plan will frequently refer to **flash drives** that we have our students use during class. Instead of saving files to a flash drive, you may save them to your computer's hard drive.

We preload these flash drives with an assortment of files that are used during class. These files can be downloaded from on our **Class Resources** page. Our class handouts and exercises can also be downloaded there. The website address is:

Introduction

A word processor is a computer program that allows you to create, edit and produce text documents, such as letters. Microsoft Word is a word processor created by Microsoft. The first version of Microsoft Word was released in 1983 as a competitor to WordStar, the most popular word processor at the time.

Exploring the Word 2016 Environment

Teacher's note:

- Mention how the **Quick Reference Guide** contains notes on everything that is covered in class.
- Mention that the **flash drives** must stay in the computer lab and are not for students to keep.

Open Word by using the **Search Windows** box or by double-clicking on the **desktop icon** for Microsoft Word 2016.

Title Bar

1. **Note** the title bar section which has **window controls** at the right end, as in other Windows programs.
2. **Note** that a blank document opens with a default file name of **Document 1**.

Quick Access Toolbar

The Quick Access Toolbar is located all the way to the left on the title bar. It contains frequently used commands and can be customized using the drop-down menu.

1. **Point** to each small icon to view its ScreenTip.
2. **Be aware** that the **Undo** button is not located anywhere else in the application except for the Quick Access Toolbar.
3. **Click** the **Customize Quick Access Toolbar** button, **click New** on the menu, and **see** the command get added to the Quick Access Toolbar.
4. **Click** the **Customize Quick Access Toolbar** button again, and **click Show Below the Ribbon**. **Click Show Above the Ribbon** to move the Quick Access Toolbar back again.

Ribbon

The ribbon contains all of the tools that you use to interact with your Microsoft Word file. It is located towards the top of the window underneath the title bar. All of the programs in the Microsoft Office suite have one.

Mention Handout 1
(The Ribbon)

Show Slide 2

The ribbon has a number of **tabs**, each of which contains **buttons**, which are organized into **groups**. Depending on the object you have selected in the document, several **contextual tabs** may appear, which provide additional formatting options for the selected object.

Try **clicking** on other **tabs** to view their buttons (**do not click the File tab yet**), and then **return** to Home tab.

Switch to Word

Active Tab

By default, Word will open with the **Home tab** active on the ribbon. **Note** how the Active tab has a white background and blue letters, and the Inactive tabs have the opposite.

Contextual Tab

Contextual tabs are displayed when certain objects, such as an images and text boxes, are selected. They contain additional options for modifying the object. Contextual tabs stand out because they are darker in color and are located to the right of all the other tabs. As soon as we start being productive in the program, we will see contextual tabs appear.

Groups and Buttons

On each **Tab**, the **Buttons** (a.k.a. commands or tools) are organized into **Groups**. The groups have names, but the names are not clickable.

Hover over some of the buttons on the Home tab to **observe** the **ScreenTips**. The ScreenTip displays the name of the button, along with a short description of what the button does.

Buttons with Arrows

Note that some buttons have images on them and some have images *and an arrow*. The arrow indicates that more information is needed to carry out the function of the button. Some arrowed buttons have two parts: the button proper and the list arrow.

- A **one-part arrowed button**, called a **menu button**, will darken completely when you point to it:
 1. In the **Font group**, **point** to the **Text Effects and Typography** button.
 2. **Note** there is no difference in shading between the left and right of the button when you point to each section.
- On a **two-part arrowed button**, called a **split button**, only one section at a time will darken when you point to it.
 1. In the **Paragraph group**, **point** to the left part of the **Shading** button. This is the “**button proper**” section of the button. **Note** how it is darkened separately from the arrow portion of the button.
 2. **Point** to the **right portion**, the section with the arrow. This is the “**list arrow**” section of the button. **Note** how it is darkened separately from the left portion.
 3. The **button proper** is the section of a two-part button that will carry out the default option or the last used option.
 4. The **list arrow** section will open an options menu.

This button has one part:

This button has two parts.

Each part darkens when you point to it.

Button proper			List arrow
Carries out the selected option.			Opens an options menu.

Dialogue Box Launcher

On some groups there is a **launcher** icon which will open a **dialogue box** or a **side panel** with related but less common commands.

Click any Dialogue Box Launcher icon, and then **close** the dialogue box or side panel.

Ribbon Display Options button

This button provides options that will hide the Ribbon from view. The main benefit to this is that it allows your document to take up more of the screen.

1. **Locate** the **Ribbon Display Options** button (to the left of the window control buttons).

2. **Click** on it. Three options appear.

3. **Click Auto-hide Ribbon**. This option essentially makes Word go into “full screen” mode. It hides not only the ribbon, but also the Quick Access Toolbar, title bar, and Window Controls.
4. To get the ribbon to **show** after Auto-hiding it:
 - a. **Point** to the **top-center** of the screen and **click**. (Clicking the three dots does the same thing.) The full ribbon can be seen and used. However, as soon as the body of the document is clicked it will hide again.

- b. **Click** in the middle of the document. **Notice** how the ribbon **hides** again.
5. To get a partial display of the ribbon to stay in view:
 - a. **Click** the “mini” **Ribbon Display Options** button on the top right.

- b. **Click Show Tabs**. **Note** this option has brought back our Quick Access Toolbar, title bar, Window Controls, and *part* of the ribbon; only the **Tabs** are visible. The buttons are not.

- c. **Click** the **Home** tab. **Notice** how the buttons come into view.
- d. **Click** in the middle of the document. **Notice** how the buttons disappear again.

Note: A shortcut for changing to the “Show Tabs” view is to **double-click** the Active Tab. If the buttons in the ribbon suddenly disappear, then you may have done this by accident.

6. To get the entire ribbon to stay in view:
 - a. **Click Ribbon Display Options**
 - b. **Click Show Tabs and Commands.** This option keeps **entire** ribbon visible at all times. It is the **default** option. We will keep this option selected for the remainder of class.

Dynamic Resizing

If you use Word on other computers, be aware that the button placement on the ribbon might look **slightly different**. For instance, a button might be a different size or be positioned in a slightly different place. The reason for this is that the ribbon auto-adjusts itself based on the size of the Word window.

1. On the **Home** tab **notice** what the buttons in the **Editing** group currently look like.

2. **Click Restore Down** to shrink the size of the Word window.

3. **Notice** how the group looks different now. The entire group was collapsed into a **single button**. Click on the button to reveal the contents of the group.

4. **Click Maximize** to bring the window back to full screen.

File Tab

The **File** tab provides a **Backstage** view of your document. The Backstage view exposes information and metadata about the currently active document, lists recently opened documents, and provides a variety of user options, such as opening, saving, and printing. Instead of just a menu, it is a full-page view, which makes it easier to work with.

1. **Click** on the **File** tab.

2. **Notice** that the ribbon and the document are no longer in view. **Note** the commands, listed on the left side of the screen, are ones you would use to perform actions **TO** a document rather than **IN** a document.
3. Other things you can do in the **Backstage** view:
 - a. **Click** the **Info** tab. The **Info** section of the **Backstage** view offers an easy to use interface for inspecting documents for hidden properties or personal information.
 - b. **Click** the **New** tab. In this section you can create a new Blank document, or choose from a large selection of Templates.
 - c. **Click** the **Open** tab. The **Open** section is used to open existing files on your computer.
 - i. It immediately presents you with a list of documents that you have **recently** opened, so you can quickly find and open them again. (This is disabled in the computer lab.)
 - ii. Clicking **Browse** opens a **File Explorer** dialogue, which allows you to find the file on your computer. We will be using this option in class.
 - d. **Click** the **Save As** tab. This section allows you to save your file.
4. To return to the document from the Backstage view, **click** the large, left pointing arrow in the top-left corner of the screen.

Workspace

Underneath the ribbon is the workspace.

1. **Note** the **rulers** and **margin** settings.
2. **Note** the **scroll bar** on the right side of the screen.
 - a. If the scroll bar is not visible, **move** the mouse and it will come into view.
3. **Note** the **blinking cursor/insertion point**, which is where **new input will display** when entered.
 - a. If the insertion point is not blinking, **move** the mouse and it will start blinking.
4. **Point** somewhere on the blank page and **note** the mouse cursor with the **I-beam shape**, appropriate for a text environment.

Status Bar

The Status bar is located below the document window area.

Current Information

The **left end** displays a variety of information about the document, such as the page number, how many total words are in the document, and whether there are any spelling errors.

Views

At the **right end** are shortcuts to the different **views** that are available. Each view displays the document in a different way, allowing you to carry out various tasks more efficiently.

Read Mode

Displays the document full-screen, making it easier to read. You cannot edit the document in this view.

Print Layout

Shows what the document looks like when it's printed. This is overall the best view for editing documents. It is selected by default.

Web Layout

Shows what the document would look like if it were saved as a webpage.

Zoom Slider

Also at the **right end** of the Status bar is the **Zoom Slider**. This allows you to adjust how large the document is displayed on the screen. It does not adjust the actual size of the document—just how big or small it is displayed on the screen (like moving a newspaper away from or closer to your eyes).

Customization

The **Status** bar can be customized.

1. **Right-click** on the **Status** bar to bring up the customize menu.
Options that are enabled have a checkmark next to them.
2. **Click** on “Line Number” to enable this option.
3. **Notice** how the menu didn’t disappear. **Click** in a clear space to dismiss the menu.
4. **Notice** how “Line: 1” appears in the **Status** bar.

Creating a Document and Saving It

Takes: 20min

Creating a document

1. When Word opens, it will display a blank document ready for you to type in. The words that you type and the formatting that you use become your document.
2. **Type** “My first document”.
3. Each document you create is temporary unless you save it as a **file** with a unique name and location.

Preparing a Save to Location – a USB Device

Note: Home students can skip this section.

Mention Handout 2
(Saving a File to a Flash Drive)

When we save a Word document, all the data in that document is collected and saved as a **file**.

Normally files are saved on a computer’s hard drive, but due to security restrictions on computer lab machines, files must be saved on removable storage devices.

For this class, we will be using a **USB flash drive** to save our work. This flash drive will remain in the lab between classes.

1. **Orient** the flash drive as pictured below.

Slide mechanism

This end goes into the
USB port on monitor

Show Slide 3
