

Online Pictures, Shapes, Text Boxes, and Other Pictures

✓ On Exercise

The insertion of specialized objects into a document can add visual interest. We will explore a few different types of objects in this section and also learn how to format the objects.

Online Pictures

The former name for this type of object was Clip Art. **Clip art** are small pictures and symbols made available for computer users to add to their documents. They can be used to enhance a narrative.

Inserting Online Pictures

1. **Click** in a clear area underneath the table to move your insertion point off of the table.

Teacher's note:

If the student's table is too far down the page, the cursor will get stuck above the table. If this happens, the student can **double-click** below the table to place their insertion point there.

2. On the **Insert** tab, in the **Illustrations** group, **click Online Pictures**.
3. A dialogue box opens that prompts us to enter a search term.

4. **Note** the words **Bing Image Search**. Microsoft Word will search the Internet for images using its search engine, Bing (it is a competitor to Google).
5. **Type helmet** in the search field and tap **Enter**.

6. **Note** the gray checkbox labeled “Creative Commons only”. Word has filtered the search results to only show images that are licensed under **Creative Commons** licenses.
 - a. **What is Creative Commons?** It is a type of copyright license that is frequently used on the internet. In general, it is a liberal license that gives you permission to use the image for free.
 - b. **HOWEVER**, Creative Commons allows content creators to add “gotchas” such as “cannot use for commercial purposes” or “must provide attribution to the original author”.
MICROSOFT WORD DOES NOT SHOW YOU THESE. So, at the end of the day, it is up to **you** to verify that you are abiding by the author’s **SPECIFIC** license terms—and finding the specific license terms is not always an easy task.
 - c. For this reason, if you are planning to use clip art for any professional purpose, we recommend using a clip art website that contains only **public use** images. One such website is **pixabay.com**. Public use images give you **complete control** over how you may use them.
Later in the lesson we will learn how to insert a picture from pixabay.com into a Word document.
 - d. Another alternative is to **purchase** clipart (also called “stock images”). This is how businesses typically obtain clip art.
7. **Find** a picture you like.
8. **Point** to the image.
9. **Click** on the **three dots** in the bottom-right corner of the image. A screen tip appears above the image containing additional information about the image, including its pixel dimensions and Internet URL.

10. **Click** in a clear space to dismiss the screen tip.

11. Now, we will insert the image into our document.

- a. **Click** on the picture to **select** it.
- b. **Notice** the checkmark that appears in the **top-right** corner of the picture.
- c. **Notice** how the Insert button indicates that **one picture** is selected.
- d. **Click Insert (1).**

Resizing Inserted Objects

Objects can be resized by using “handles” that appear around a selected object.

Mention Handout 6

1. If you cannot already see a border and small circles around your picture, **click** on the picture to select it.
2. **Point** your mouse to one of the circles. These circles are called **resizing handles**. **Notice** the pointer shape changes to a **white arrow with two ends**. As we learned before, this is a **resizing cursor**.

3. Using one of the **corner circles**, **click** and **drag** towards the center of the picture and **note** it resizes the picture **proportionately**. This does not always work with other types of objects. Other objects require you to hold down **Shift** while resizing to retain the original proportions.

Warning: Increasing the size of an online picture can result in a **distorted look** when printed. To avoid this, try not to make an online picture any larger than it was when you originally inserted it into the document.

4. **Click** and **drag** from one of the **side circles** and **note** the change in shape of the picture. These circles do **not** resize the picture proportionally. **Click Undo**.
5. **Click** and **drag** the **circular arrow icon** above the picture **note** how the picture **rotates**. **Click Undo** to get it back to its original rotation.
6. **Using** the **rulers** on the top and left edges of document as a reference, **resize** the object proportionally to approximately 1 ½" square.
7. **Deselect** the object by clicking in a **blank area**.

Applying Wrapping Styles

"Objects can be placed in your document in two ways: either inline or floating. Inline objects are those that reside on the same layer as your text and are positioned within the stream of text that surrounds the object. Floating objects are those that are placed on a layer over the text". –Allen Wyatt

This positioning of objects is called the **text wrapping style**. The wrapping style can affect how difficult it is to move an object on the page. If it seems difficult to move an object where you want to, then you may need to change the wrapping style:

1. **Select** the picture object and **move** your pointer around on it until you see a **Move** cursor shape.
2. When you see this cursor, **click** and **drag**. You should **notice** that it is hard to move the object. We need **to change the wrapping style** so it is easier to move. The default wrapping style for pictures is **In Line with Text**, which means that only text can move it around. This can be very restricting.

3. **Click Layout Options** to the **right** of the selected object.
 - a. It presents you with a set of icons, each of which represent a **wrapping style**.
 - b. You can get an idea of what each wrapping style does by looking at the icons. The blue, horizontal lines represent your document's text, and the gray arch represents the image.
 - c. **Point** to the icons to see a **ScreenTip** containing their names. **Click In Front of Text**.

4. **Notice** the small “anchor” symbol that has appeared after we changed the wrapping style to a “floating” style. This is called an **object anchor** and it indicates where a floating object is located in relation to the text in your document. If we were to insert multiple lines of text somewhere in our document above the anchor, it would cause our object to get “bumped” down, even though it is floating.

5. **Using** the **move cursor**, **move** your object slightly to the left. You should **see** a **green line** appear. This green line helps you to align your object against the left margin of the document.
6. **Move** the object so it is on top of the **last column in your table**.
7. **Notice** how there are now **two** contextual ribbons: **Table Tools** and **Picture Tools**. This is because our picture object is selected *and* it is on top of the table.

- a. **Picture Tools** has one tab: **Format**
- b. **Table Tools** has two tabs: **Design** and **Layout**

Applying Formatting to Pictures

1. **Click** the picture to select it if it is not already selected.
2. On the **Picture Tools** contextual ribbon, **click** the **Format** tab and, in the **Picture Styles** group, **move** your pointer over the predefined **Picture Styles** thumbnails to see a **Live Preview** of their effects.
3. **Click** the **More** button to see more predefined styles. As you point to the different styles **note** the ScreenTips that appear which contain the name of the style. **Click** on the **Metal Oval** style.

4. In the **Picture Styles** group, **click** on **Picture Border** and **click** on any color that you like.
5. **Deselect** the picture.

Schedule						
Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday

Shapes

A shape is another type of object that can be inserted into a Word document.

Let's insert an **arrow shape** into our document.

1. On the **Insert** tab, in the **Illustrations** group, **click Shapes**. A menu of shapes will open. The shapes are organized by type of shape.
2. In the **Line** section, **mouse over** the line shapes until you see a ScreenTip that says **Double Arrow** . **Click** the shape.
3. **Find** your mouse cursor in the document and **note** that it is shaped like a crosshair .
4. We are going to “draw” an arrow from our **helmet picture** to the word “**Monday**” in our table.
 - a. **Point** to the helmet picture.
 - b. **Click** and **drag** to the word Monday.
 - c. **Let go** of the mouse button.
5. **Note** the arrow is **selected**. You can tell by the **resize handles** at the ends.
6. With the arrow still selected, **note** the **Drawing Tools** contextual ribbon.  It has one tab: **Format**. **Click** the Format tab.
7. In the **Shape Styles** group, **click Shape Outline**. **Point** to **Weight** and, on the sub-menu, **click 6 pt**.
8. **Click Shape Outline** again. **Mouse over** the colors to see a live preview on your arrow. **Click** a color to select it.
9. **Point** your mouse at the **body** of the arrow until you see a **Move cursor**. **Click** and **drag** to move the arrow to another place.
10. **Deselect** your arrow.
11. **Insert** your cursor beneath the table.

Tip: To change the **default line styling** that is used when you create a new line, **right-click** on the line whose style you want to make the default and **click** “**Set as Default Line**”.

Next, we will insert a **star shape**.

1. On the **Insert** tab, in the **Illustrations** group, **click Shapes**.
2. In the **Stars and Banners** section, **mouse over** the shapes until you see **5-point Star**  and **click** it.
3. **Find** your cursor in the document and **note** that it is shaped like a crosshair .

4. **Click** next to the insertion point and **drag** diagonally down and to the right. Don't let go of the mouse until the star until it is about 3" square (**use** the document rulers as a guide). **Let go** of the mouse button when you finish dragging.
5. **Remember** that as long as you don't let go of the mouse button, you have **full control** over the size and shape of the drawing.

Tip: Using the corner resize handles on a shape will **NOT** resize the shape proportionally, like with clipart. To resize a shape proportionally, you must hold down **Shift** while resizing.

5. **Find** the **move cursor**  on the star object and **move** the star to the **right side of the document**. **Use** the green line to **align** it to the right margin of the document.
6. On the **Drawing Tools** contextual ribbon, on the **Format** tab, in the **Shape Styles** group, **click More** to see a gallery shape styles that could be used. **Mouse over** these Quick Styles to **see** a **live preview of the different styles**. **Scroll** down the gallery and **click** a quick style in the last row.

Clicking between objects may make tabs inactive

1. **Click** on the helmet object again. **Note** that your star shape object has become deselected and the Drawing Tools contextual ribbon associated with it has disappeared.
2. **Note** that **two contextual ribbons** now appear; one associated with the online picture object (Picture Tools) and one with the table (Table Tools). However, none of the tabs on either contextual ribbon are active.

3. **Click** on the **Design** tab and **note** the background color of the tab is **white**. This is how you can tell it is active.

4. **Click** on the star object again. **Note** that while the Drawing Tools contextual ribbon may appear, its **Format** tab might not be active. If you don't see the tools you expected to see, you may have to **click** on the tab to activate the tool selection.

Text Boxes

A text box is a freestanding object that can contain words. *Let's insert a text box.*

1. **Deselect** the star object.
2. **Click** on the **Insert** tab. In the **Text** group, **click Text Box**. A menu of Built-in text box styles will appear. However, to have more control over format, placement and size, we will draw our own text box. **Click Draw Text Box**.
3. **Click** into your document where you want the text box to start and **drag** diagonally and to the right to where you want it to end.
4. The insertion point within the text box indicates that what you type will be inserted there. **Type your name**.
5. **Resize** the text box to just fit around your name.
6. To move your text box, **make sure** it is selected, then **move** your pointer to the **edge of the box** until a **move cursor** appears . Then **click** and **drag** your text box to the **center** of the **star shape**.
7. **Note** that the text box has a **black border** and it is also **filled** with white color.
8. You can change formatting of the text box by using tools on the **Drawing Tools** contextual ribbon.
 - a. With the text box selected, on the **Drawing Tools** contextual ribbon, **click** the **Format** tab. In the **Shape Styles** group, **click Shape Outline**, and **click No Outline**.
 - b. Next, In the **Shape Styles** group, **click Shape Fill** and **click No Fill**. **Deselect** the text box.

Other Pictures

In addition to inserting pictures via Online Pictures, you can also insert images of your own into a document. These images can be ones that you've made yourself (like photos taken with a camera) or ones that you've downloaded from the Internet. We have placed a couple of pictures on the flash drive for you to use in this section.

Inserting a Picture

1. **Open** a new blank Word document.
2. **Click** the **Insert** tab. In the **Illustrations** group, **click Pictures**.
3. In the Insert Picture dialogue box, **navigate** to the flash drive and **click Orchid.jpg**.

4. In the dialogue box, **click Insert**.

Color Effects and Artistic Effects

1. To prep for this section, let's move our picture to the right side of the page. **See if you can remember how to do this. This is an important thing to know!**
 - a. **Change** the Text wrapping style to "In front of text".
 - b. **Click** and **drag** your picture to the right side of your document.
2. On the **Picture Tools** contextual ribbon, on the **Format** tab, **find** the **Adjust** group, and **click** on **Color**. **Mouse over** the coloring effects that could be applied to your picture.
3. **Click** on the **title bar** to dismiss the gallery.
4. In the **Adjust** group, **click** on **Artistic Effects** and **mouse over** the artistic effects that could be applied to your picture.
5. **Click** on the **title bar** to dismiss the gallery.

Remove Background Effect

1. To prep for this section, we are going add a **dark background color** to the document.
 - a. **Click** on the **Design** tab, and in the **Page Background** group, **click** on **Page Color**.
 - b. **Click** a dark color.

Note: By default, Word will **not print** a page's background color because of the amount of ink required.

2. On the **Picture Tools** contextual ribbon, **click** the **Format** tab and, in the **Adjust** group, **click** **Remove Background**. Your picture will look like the picture below. Also, a new contextual tab named **Background Removal** will open.

3. On the **Background Removal** tab, in the **Refine** group, **click** **Mark Areas to Keep**.
4. The pointer will change to the **shape of a pencil**  when you point to the picture. **Use** the **tip** of the pencil to "**click away**" the bright pink sections.
5. In the **Close** group, **click** **Keep changes**.
6. **Deselect** your picture.

Crop Picture Effect

1. **Open** a new blank Word document.
2. **Insert** another picture from your flash drive. It is named **red-roses-photo.jpg**.

3. On the **Picture Tools** contextual ribbon, on the **Format** tab, **find** the **Size** group and **click** on the **list arrow** part of the **Crop** split button.
4. **Point** to **Crop to Shape**. In the **Basic Shapes** section of the Shapes menu, **click** **Heart** .

Format Painter

The Format Painter is used to **copy** the **formatting** of a piece of text or picture and **apply** it to something else. For instance, in the case of text, the formatting would be the font face, size, and color. We will use the Format Painter to apply the formatting of one object to another.

1. **Deselect** the **red roses** object which we just cropped to a heart shape (**click** the right margin).
2. **Insert** the **Orchid.jpg** picture from your flash drive again.
3. **Resize** each object **proportionally** (use the corner handles) until they appear side by side. (make them about **3" wide**).
4. **Select** the **red roses** object.
5. **Click** the **Home** tab and in the **Clipboard** group, **click** **Format Painter**.

6. **Move** the mouse pointer around the screen. **Notice** how the mouse cursor has changed to an arrow with a paintbrush next to it.

7. **Click** on the orchid object that you just inserted. **Notice** how it now has the same cropped shape as the red roses object.

8. **Deselect** the orchid object and **note** your cursor shape has returned to an **I-beam shape**.

Double-clicking Format Painter makes it possible to apply a format to more than one object. *Let's try it.*

1. **Insert** your cursor to the right of the orchid object and tap **Enter**.
2. **Search** for **Online Pictures** pictures using the search term **flowers**.
3. In the search results, **locate** two pictures of **flowers** that do not have white backgrounds. Since the search dialogue allows the insertion of multiple objects at one time, **click** each of the two pictures and then **click Insert**.

4. **Resize** each image so they are each about **3" in width**.
5. **Click** one of the objects that is formatted with a heart shape.
6. **Double-click Format Painter**.
7. **Click** on one of the flower objects and **notice** it adopts the heart-shaped format.
8. **Deselect** the flower object and **notice** that the cursor does not change back to an I-beam.
9. **Click** on the **second flower object** and **notice** it adopts the heart-shaped format.
10. In order to **"turn off"** the Format Painter, **single-click** on its button in the Home ribbon.

Inserting a Picture from a Webpage

You can also insert images from a webpage into your document. However, be aware that many images on the internet are **protected by copyright**. When you find an image you like, you should read the website's fine print to determine if you can use the image or not. This is especially important if you are making a presentation for commercial purposes (for example, as part of your job).

1. **Open** a new, blank document.
2. Using the Start Menu, **open Firefox**.
3. **Click** into the **address bar** at the top of the screen and **type** **www.pixabay.com**. Pixabay is a website that contains images that you can download and use for free, without restriction.
4. **Type** **"healthy food"** into the search box and **tap** **Enter**.
5. **Click** on an image you like (except for the ones in the first row—those cost money).

6. On the next screen, **notice** the **copyright notice** on the right. It says **"CC0 Creative Commons"**. This means you can use the image however you want. You don't even have to give the original author credit.
7. **Right-click** in the **middle** of the image and **select Copy Image**.

CC0 Creative Commons
Free for commercial use
No attribution required

Tip: If you're planning on printing the document, it's best to use a **high-resolution** version of the image. To do this, click the green "Free Download" button on the right. This will download an image file to your hard drive. Then, follow the instructions found in the "Inserting a Picture" section to insert the image file into the presentation.

8. Using the **taskbar**, **switch back** to **Word**.
9. In the **Home** tab, in the **Clipboard** group, **click** the **Paste** button proper.
10. **Close** Firefox.

Quick Parts (supplemental)

Quick Parts allows you to add preformatted portions of text. The portions of text can be reused as many times as you like. If you are constantly typing the same text such as a company name or an address, you can create a quick part out of it and in a couple of key strokes insert the text into your document. Quick Parts can save you a lot of time when you're creating documents.

Creating a Quick Part

1. **Close** any Word documents you have open and open a new, blank document.

Teacher's note:

It is important that all Word documents are closed; otherwise they will not get the message about saving their building blocks.

2. **Type** Montgomery County-Norristown Public Library into the document and **highlight** it.
3. **Bold** it and **change** the font size to 14. Do not deselect the text.
4. On the **Insert** tab, in the **Text** group, **click** the **Explore Quick Parts** button and **click Save Selection to Quick Part Gallery**.

5. A dialogue box opens. In the **Name** field, **replace** the content with a code such as **m1**. The code is very important because this is what you will type to retrieve your quick part. Make it **short** but **understandable**.

Create New Building Block

Name: m1

Gallery: Quick Parts

Category: General

Description:

Save in: Building Blocks.dotx

Options: Insert content only

OK Cancel

6. **Leave** other fields at the default settings.
7. **Click OK**.

Inserting a Quick Part (method1)

1. **Insert** your cursor at another spot in your document.
2. **Type m1** and then **tap** the **F3** key.

Inserting a Quick Part (method2)

1. **Click** the **Insert** tab on the ribbon.
2. In the **Text** group, **click Explore Quick Parts**.
3. The Quick Part you created will be listed at the top. **Click** it.

Saving the Building Block

The Quick Part Building Block gets saved to a Word template which contains all of the settings contained in a new document. When you exit out of Word, you may be prompted to save the building block to **Normal.dotm** or **Building Blocks.dotx**. You should respond in the affirmative.

1. **Close** the document without saving changes.
2. Next, it will prompt you to save your building blocks. At home or work, you should always click **Save**. However, since we are on a public computer, we will **click Don't Save**.

Repeat (supplemental)

The Repeat button is located in the Quick Access Toolbar. It repeats the last action you performed.

1. **Open** “Blues Music.docx” on your flash drive.
2. In the first paragraph, **select** the word “Blues”.
3. On the **Home** tab, in the **Font** group, **click Text Effects and Typography** and **click** a style of your choice.

4. **Notice** the **Repeat** button in the Quick Access Toolbar.

5. **Find** another instance of the word “blues” in the document and **select** it.
6. Click **Repeat**. **Notice** how the text effect was applied to the selected text.
7. **Click Undo**. **Notice** how the Repeat button was **replaced** with the Redo button. The Repeat button **disappears** when you undo something.

8. **Click Redo** to reapply our text effect. The Repeat button appears again.
9. **Close** Blues Music.docx and don't save changes.

Why would you use Repeat instead of Format Painter?

Repeat only repeats the last action you performed. For instance, if you applied Bold and then Underline formatting to a word, repeat would only repeat the Underline action.

Could we have used Repeat with the previous crop-to-shape exercise?

Since there were multiple steps involved, (inserting a picture, resizing, moving, then cropping), Repeat would not have helped us in that situation.
